## **A Leading Supplier of Industrial Control, Monitoring and Solutions Provider Seeking Aspiring Individual to join us**

We are a local distribution company representing more than 20 established global brands in the field of industrial automation, energy & environmental monitoring and power quality. We are part of a public listed company and for the last 30 years, we have been recognized in the industry for offering innovative and high quality industrial solutions.

Join our growing team of engineers in architecting solutions as we drive the digital transformation efforts of Tai Sin Group. Reporting to Head – Group IT, you can expect to work across multiple business functions to scale and transform the resulting processes and customer experience, furthering the competitive advantage of the Group.

As a member of the Group IT team, the candidate will fulfil and value-add to the information, process and operational needs of our users in their daily business activities through the development and support of the Group's existing and new digital applications.

### **Engineer – IT (Network and Security) Tai Sin Electric Ltd**

#### **Responsibilities**

- Manage network infrastructure to ensure alignment of technical requirements
- Provide technical inputs on the procurement of network equipment and ensure compliance with procurement policies
- Oversee the installation, upgrading, operation, control, maintenance and effective use of LAN and/or WAN
- Review releases, upgrades and fixes available from systems software and supplies and identify those which merit action
- Perform network fault troubleshooting and root cause analysis to locate sources of network issues
- Review technical documents for processes, technology and devices
- Identify and propose variances to the architecture to accommodate project needs
- Plan and coordinate network security measures for network infrastructure
- Investigate and assess the risks of network attacks and recommend remedial action
- Facilitate and participate in the disaster recovery plan, processes and protocols for disaster recovery of network infrastructure
- Assess near-term needs to establish business priorities
- Support audit queries and comply with security and control policies in place
- Optimise the use of available IT resources

#### **Requirements**

- At least 3 years' experience working in Windows/Linux and VM environments
- Possess a diploma or bachelor's degree in a relevant field or discipline
- Familiar with or able to adapt quickly to network equipment adopted by the Group
- Experience in cloud technologies or app development would be a plus (AWS/Azure)
- Experience in internal stakeholder engagement, including conducting user interviews and requirements gathering
- Work well in an agile project team and in an iterative approach, driven by stakeholder feedback and data insights
- Strong communication, organisational and documentation skills
- Willing to travel to various entities at different locations within the Group of Companies if required
